Methodology and limitations

The sample is the officially recognized gold, silver and bronze medalists in the men’s Olympic 100m for Games labeled 1988 through 2024 (Tokyo 2020 was contested in 2021). Only the individual 100m event is included, not relay or 200m medals.

Each athlete is counted once in the 20-person planetary frequency charts; the medal-group Mars chart instead counts 10 podium results per medal type. Repeated medalists are intentionally repeated in the latter.

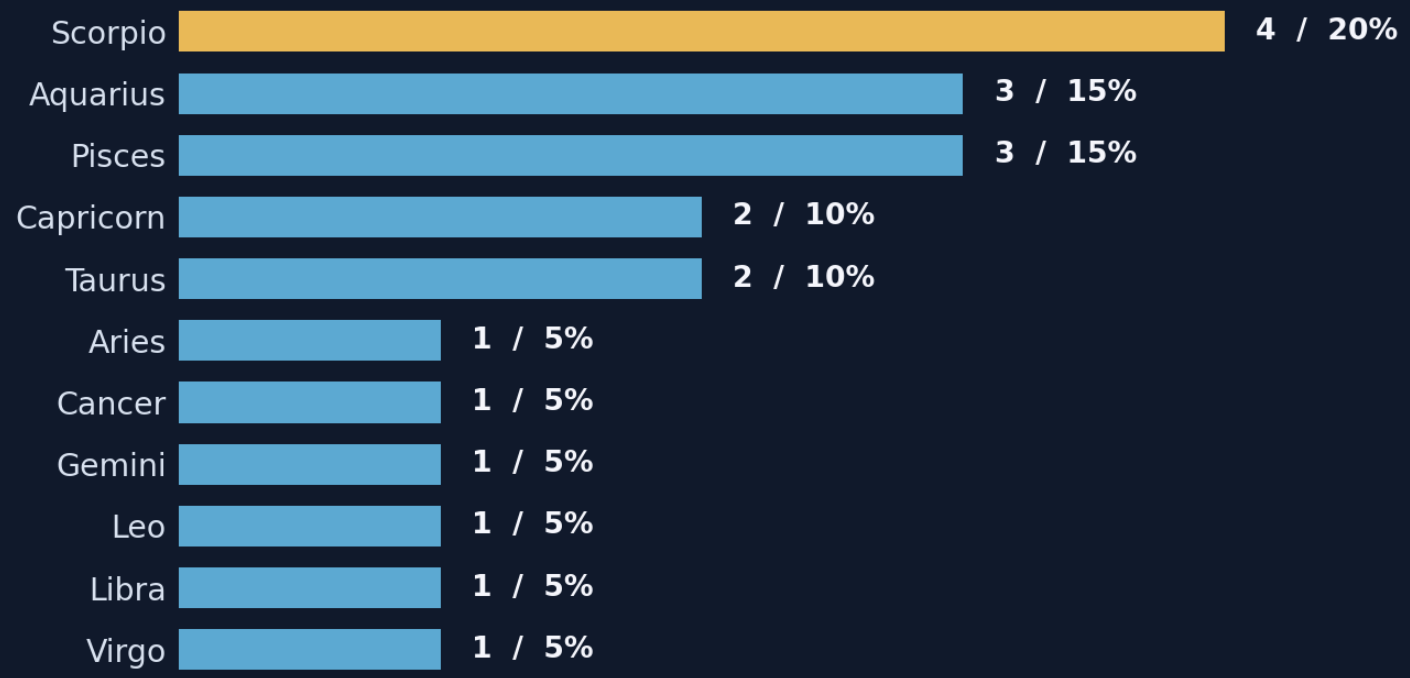

Calculations use Swiss Ephemeris with Moshier calculations, tropical zodiac and 12:00 UTC reference time. Without verified birth times, house positions and ascendants cannot be derived. Any planet that changes sign during the UTC birth date is flagged in the individual records.

No control group, statistical significance test or causal interpretation is supplied. Planetary distributions are exploratory and can reflect birth-year cohorts and selection effects.

Date conflicts are handled by favoring Olympedia / national Olympic biography over conflicting federation profile (Carl Lewis: July 1, 1961).
